

Protect East Roswell Park Land!

The City of Roswell has plans to relocate Fire Station 27, constructing a new station inside East Roswell Park. This plan, including selection of the park land, was formulated without input from the general public. Nearby residents, park users and green space advocates are strongly opposed to this use of park land. **We are petitioning city staff and elected officials to select another site.**

Relocating Fire Station 27 irrevocably takes a significant amount of green space from park use. Local residents and visitors use the disc golf course and shaded walking trails in that location every day. The construction and use of the fire station will have irreparable impacts on the environment, wildlife, and amenities for park users. The close proximity of the proposed fire station to existing homes also raises serious concerns about noise, safety, and overall quality of life.

This is a call to action to all friends of East Roswell Park. Sign this petition and email city officials to urge them to reconsider the placement of Fire Station 27 and to protect the integrity of our community's green space. Together, let us work towards a solution that both ensures our safety and preserves the natural charm of our cherished park.

Please take a moment and sign the petition.
